

8mm WhiteLite500

light duty product sheet

Panels can be set up in a brick wall / offset pattern for greater joint strength

Overview

All SmartRink skating surfaces can be used for hockey, figure skating or recreation purposes. Although all the products are versatile there are applications to which they are better suited. If you are uncertain about which product to use please contact your nearest NOICEONE representative. LiteWhite500 uses High Molecular Weight PE, sinter pressed and then machined to exacting standards. Sinter pressed sheets are far more durable than extruded material and will not only last longer but they will deliver superior performance over the very long term.

Lines & Markings: Goalie crease, blue line, red line, goal line available on request

Performance: High Performance skating material designed to be used everyday
